Software engineering & AI placement
candidate

Computer Science (Artificial Intelligence) student building reliable software and practical AI systems. Interested in software engineering, agentic AI, and product-focused technology roles.

EDUCATION

BSc Computer Science (Artificial Intelligence)

2025 - present

Brunel University London

- Relevant study: software design and implementation, introductory programming, logic and computation, databases, information systems, and collaborative project delivery.
- Selected results: Logic and Computation (A*); Information Systems and Organisations (A); Software Design and Implementation (A); Introductory Programming (B+); Programming Applications (B+).

SELECTED TECHNICAL PROJECTS

LifeOS - Agentic Personal-Administration System

Python · Gemini · Google ADK · Google Cloud · REST APIs

- Built an evidence-first agent that extracts facts and obligations from documents, flags missing information, and produces editable next actions without presenting assumptions as facts.
- Refactored domain-specific logic into generic admin items and added GET/PATCH API endpoints so multiple documents can feed one manageable workflow.
- Diagnosed authentication and model-region failures, validated PDF extraction with real document structures, and kept deadline planning deterministic where reliability mattered.

SwiftBot Traffic-Light Rover - Team Software Design Project

Java · Maven · SwiftBot API · Camera classification · Testing

- Designed a modular control system that detects coloured signals within 30 cm, executes timed manoeuvres, handles button input, and produces an execution log.
- Improved unreliable RGB classification, corrected control mappings, resolved dependency issues, and implemented sensitivity modes plus safe termination flows.

Java Task Manager - Independent Build

Java · Collections · Object-oriented programming · Input validation

- Turned first-year programming concepts into a complete productivity tool for creating, organizing, and tracking tasks using structured objects and mutable collections.

TECHNICAL SKILLS

Languages

Java, Python, SQL, JavaScript, HTML/CSS

Tools

Git, Maven, Google ADK, Gemini API, Google Cloud, Eclipse, VS Code

Practices

OOP, REST APIs, testing, requirements analysis, debugging, documentation, team leadership

EXPERIENCE & LEADERSHIP

READY Programme Finalist - 2025

- Recognised for professional development, initiative, and career readiness through Brunel University's READY Programme.

Group Project - Task Lead

- Planned work, distributed roles, set soft deadlines, and kept a university team moving when communication slowed.

Professional experience

- Marketing Intern at MarcoPolo.ai, IELTS Instructor at Mentors' Bangladesh, and Content Writer at Falcon Academy of Sciences.

Part-time & customer-facing experience

- Back of House at Nando's Westfield, Cashier at North End Coffee Roasters, and Store Assistant/Cashier at Shwapno.
